PROFESSIONAL SUMMARY

Professional Data Scientist/Analyst with hands-on experience at RP2, specializing in Python, SQL, machine learning, EDA, data visualization, and Power BI. Experienced in data preprocessing, feature engineering, predictive modeling, model evaluation, statistical analysis, and business intelligence, with end-to-end machine learning solutions, interactive dashboards, and transforming complex datasets into actionable insights.

SKILLS

Programming & Data Analysis: Python, SQL, Pandas, Numpy, EDA, Data Transformation, Data Cleaning, Data Preprocessing

Machine Learning: Scikit-learn, Predictive Modeling, Model Evaluation, Deep Learning, NLP, Statistics:

Data Visualization & BI: Power BI, DAX, Excel, Dashboard Development, Streamlit, plotly

AI & Generative AI: Artificial Intelligence, Generative AI, Prompt Engineering, Google Gemini API

PROFESSIONAL EXPERIENCE

Data Scientist, RP2 pvt ltd

Jun 2026 - Present

- Collected, cleaned, and preprocessed structured datasets using Python, Pandas, and NumPy, preparing high-quality data for analysis and machine learning workflows.
- Performed EDA to identify trends, patterns, correlations, and anomalies and generate actionable insights.
- Applied feature engineering, data transformation, and validation techniques to improve dataset quality and modeling readiness.
- Developed and monitored KPIs and analytical metrics to evaluate business and operational performance.

Ai & Data Analytics Intern, IBM Innovation Centre for Education (ICE)

Mar 2026 - May 2026

⊕ [Live Link](#)

- Developed a cloud cost intelligence system to analyze healthcare infrastructure spending and identify cost trends, peak periods, seasonal patterns, and high-cost services.
- Implemented statistical anomaly detection to identify unusual cloud spending patterns and potential cost outliers.
- Developed an interactive Streamlit dashboard with KPIs and visualizations to monitor cloud expenditure and support data-driven cost optimization.

PROJECTS

Smartflow AI Traffic Prediction · Python, Pandas, Scikit-learn, Streamlit, Machine Learning, Google Gemini API, Generative AI, SQL

⊕ [Project Link](#)

- Developed an end-to-end traffic prediction system using Python and Machine Learning to predict traffic conditions from vehicle and time-based data.
- Performed data preprocessing, EDA, feature engineering, and statistical analysis to identify traffic patterns and peak-hour trends.

- Compared multiple ML models and achieved 96.81% accuracy with Random Forest, selecting the best-performing model based on evaluation results.
- Integrated Google Gemini AI with an interactive Streamlit dashboard to deliver predictions, model confidence, and actionable traffic recommendations.

Global Sales Analytics · Python, SQL, Excel, Streamlit, Seaborn, Machine Learning, Scikit-learn, Statistics, Visualization

⊕ [Project Link](#)

- Analyzed and transformed global sales datasets using Python, Pandas, and SQL to uncover trends, patterns, and key business drivers.
- Performed EDA and feature engineering across product, customer, regional, and time-based dimensions to identify performance patterns and growth opportunities.
- Applied statistical and comparative analysis to evaluate sales, profit, order volume, and regional performance.
- Developed an interactive Streamlit dashboard to visualize KPIs, sales trends, profitability, and regional performance.

Cloud Cost Intelligence System for Healthcare · Python, SQL, Pandas, Machine Learning, Scikit-learn, Seaborn, Streamli, Visualization

⊕ [Project Link](#)

- Developed a cloud cost intelligence system to analyze healthcare infrastructure spending and identify cost trends, seasonal patterns, peak periods, and high-cost services.
- Performed data preprocessing, EDA, feature engineering, and statistical analysis using Python, Pandas, and NumPy to extract meaningful cost patterns.
- Implemented statistical anomaly detection to identify unusual cloud spending and potential cost outliers.
- Built an interactive Streamlit dashboard with KPIs, visualizations, and anomaly insights to support data-driven cloud cost optimization.

CERTIFICATIONS

Exploratory Data Analysis for Machine Learning, IBM

Data Visualization with Python, IBM

Machine Learning with Python, IBM

Python for Data Science, AI & Development, IBM

SQL: A Practical Introduction for Querying Databases, IBM

Relational Database Design
